

## CLAIMS

- I. A substitute control device to immediately remedy traffic related problems.
- II. Will free up the manhours of policemen, firemen, traffic engineers and provide times for their services elsewhere due to time involvement at intersections where there is no control.
- III. Control or eliminate traffic accidents.
- IV. Lower the cost of insurance. (statistics show that when outages occur, there is a higher incidence of traffic related accidents and claims).
- V. Control pedestrians movement by creating a safety zone when power is interrupted.
